AniRate

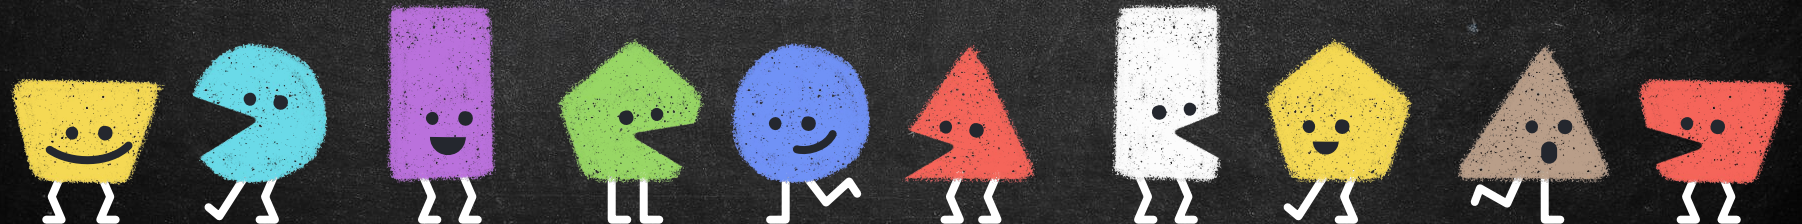
Rate Any Anime

Having trouble finding the next anime to watch?

We present AniRate, a rating & recommendation app which

- Gives you all the anime ratings from the community
- Selects filters to find the best from your desired type of anime
- Shows detailed information about ones of your interest
- Gives personal recommendation according to past activities
- Allows you to comment and interact with other users



Tasks

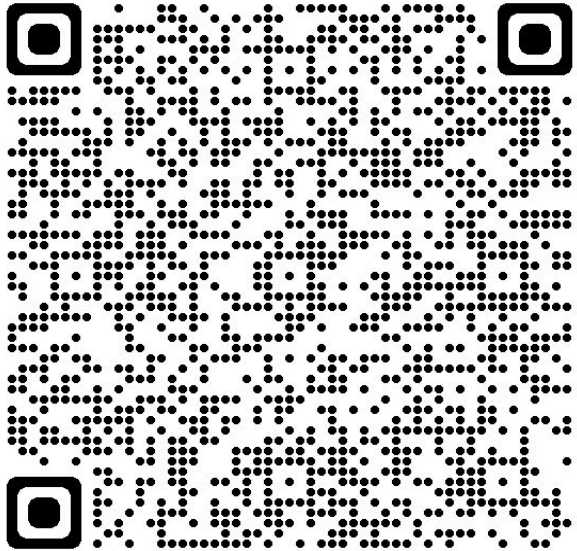
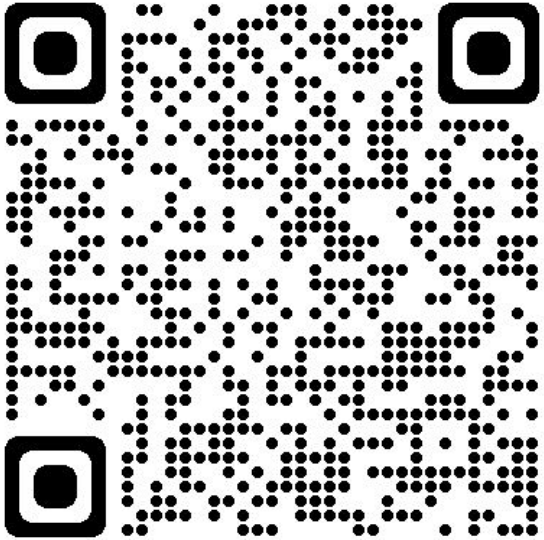
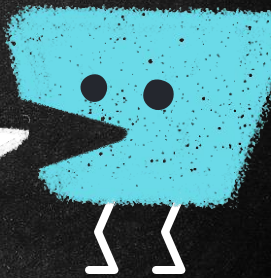
Prototype (Figma)



README





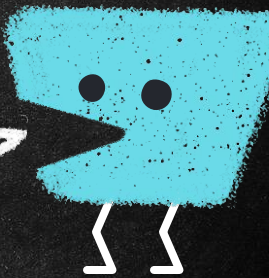
Prototyping Tool- Figma

What was easy

- Collaboration and Synchronization
- Image Pasting and Positioning
- Similar Objects Manufaturing
- Fast Prototype Preview

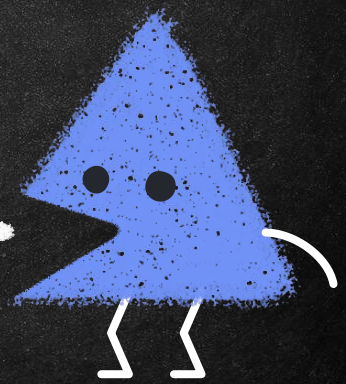
What was hard

- Precise Object Selection (if overlaped or grouped)
- Text Fonts Selection (you need to scroll)
- Objects Exceeding Frame Boundary are hided



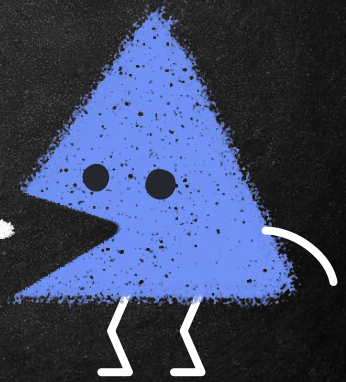
Limitations

1. Many features are not implemented yet (e.g. account creating, recommendation, adding to personal list, commenting)
2. No modifiable variables – everything is hard coded
3. Only finished one anime profile



Tradeoffs

1. Tab layout to long page
   - require user to swipe up and down for different types of information
   - more intuitive and less number of pages
2. Top tab to bottom tab
   - covering tab when using & possibility of mistouching
   - better reachability



Hard-coded Features

Most features are hard-coded, since we haven't create a database yet.

For instance, all information on the anime profile page are not modifiable, and we only created one sample page for Spy X Family.
