AniRate Medium-Fi Prototype README

Prototype Link

https://www.figma.com/proto/QXjZcvPToY26YtOSajg0js/AniRate-Mid-Fi?node-id=89%3A496&scaling=scale-down&page-id=0%3A1&starting-point-node-id=89%3A496

How To Use

The link is the interacting prototype supported by Figma, leading to an android-like interface. You can check the clickable button by clicking blank places.

After entering the app by clicking on the guest/login button in the home screen, the user can switch between the four featured pages(trending/ filter/ recommendation/ personal profile) by clicking on the icons on the bottom tab.

You can view deeper detail if you press the block of Spy×Family. Swipe up and down to see different types of information, e.g. casts, staffs, platforms and many others. You can share the page on social media by clicking the share button at the top of the page, or leave your comments by pressing the "Leave comments & rating" block at the end of the page.

Limitations

- Filtering and sorting functions on the filter page are not well-implemented yet. You can only trigger the event but the result list is fixed.
- Most of the functions are only implemented in one instance, and no variable is modifiable, e.g. comment or rating.
- Many features are still not implemented, e.g. cast and staff profile, episode page and others.

Hard-coded features

Most features are hard-coded, since we haven't created a database yet.
